

Federico Zivolo

Front-End Developer & UI Designer

Hi, I'm **Federico!**
I'm a **Front-End Developer** and **UI Designer** fell in love with web technologies.

I love to write **JavaScript**, especially when I can use it to create awesome interfaces thanks to my extensive **CSS** knowledge.

My Projects

Most of the best things I have done in my career are open source projects, these are my favourites:

Bootstrap Material Design

★15k

fezvrasta.github.com/bootstrap-material-design

When I first seen the Google I/O where Material Design was presented, I instantly fell in love with it!

Unluckily, the only viable way to easily use it in a web project was Polymer.

I told myself "*There must be an easier way!*" so I have created Bootstrap Material Design. An easy way to adopt Material Design in your Bootstrap application.

Popper.js

★2k

popper.js.org

Every single time I have to work with tooltips and popovers, I have to find tricky ways to make them work as I expect.

Popper.js is the result of years of experience with them: an easy way to manage tooltips and popovers in your web application.

Work Experiences

Front-End Developer & UI Designer

March 2015 - Present

I'm working at **Sysdig** as Front-End Developer and UI Designer, in the Sysdig Cloud team.

My role is to design new features and then implement them in an Ember.js application.

Front-End Developer & UI Designer

December 2014 - March 2015

I worked at **GovWhiz** as Front-End Developer and UI Designer. My role was to prototype pieces of UI with JavaScript and help with the conversion in Angular.js. I also designed the UI of a web-application and an Android application.

Full Stack Developer

September 2013 - December 2014

I started at **Progetto 2000** as PHP developer but I quickly switched to a new project written with JavaScript and Node.js.

There's a lot more!

This is just a resume, if you want to learn more about me please visit my portfolio or my social pages!

Or, even better, send me an email to arrange a meeting.
